

DRY UTILITIES

The Dry Utility Division at **Murow Development Consultants** provides our clients with dedicated service to ensure timely Dry Utility components of their project.

Our division is “design based” with vast knowledge of power distribution, design and agency-specific standards. This helps our team provide real-time design scenarios to assist our clients and utility agencies to complete time sensitive tasks. The Dry Utilities is a critical path in land development which is often overlooked and can lead to costly delays. Our team has built meaningful relationships with agency planners and engineers to help expedite the process. With the continued growth of new development, our team has streamlined the process to maximum success. Our team coordinates multiple project types in multiple jurisdictions including mixed-use and commercial development, tract planning, master planned communities, and substation coordination.

Our Services Include:

- Assistance with New Installations
- Utility Availability and Conflict Reporting
- Constructability Analysis and Reviews
- Cost Analysis / Estimating
- Facility Removals
- Overhead Relocation
- Overhead to Underground Conversion
- Indoor Transformer Room Design and Coordination
- Temporary Power Coordination
- Substation Coordination
- Permit Expediting
- Coordination of Plans, Contracts and Easements
- Existing Utility Exhibits
- Utility Composite Exhibits
- Applicant Design
