

DRY UTILITIES DESIGN & COORDINATION

Pre-Development

Dry Utility coordination is a critical component of land development and if overlooked, will lead to costly delays. The Dry Utility Division at Murow Development Consultants is committed to providing our clients with accurate solutions and treats every project deadline with the utmost respect. We coordinate several project types in multiple jurisdictions, including mixed-use, commercial, tract planning, master-planned communities, and substation coordination.

OUR DRY UTILITIES SERVICES INCLUDE:

- Assistance with New Installations
- Utility Availability and Conflict Reporting
- Constructability Analysis and Reviews
- Cost Analysis / Estimating
- Facility Removals
- Overhead Relocation
- Overhead to Underground Conversion
- Indoor Transformer Room Design and Coordination
- Temporary Power Coordination
- Substation Coordination
- Permit Expediting
- Coordination of Plans, Contracts and Easements
- Existing Utility Exhibits
- Utility Composite Exhibits
- Applicant Design

Our division utilizes its extensive knowledge of power distribution, design, and agency-specific standards to mediate client needs and utility agency requirements, ensuring a smooth transition between the preliminary design phase and project completion. Our team has built meaningful relationships within the utility industry to expedite this process and guarantee your project's needs are met. With the continued growth of new development our team is prepared to handle any dry utility-related matter and is committed to success.
